

INFUSION SERVICES

Dobson Healthcare Services, Inc.

With Dobson's Infusion Services, clients receive their infusion therapy or IV treatment without the need to visit an infusion center. There are several aspects to our Infusion Services including administering therapies, maintaining the intravascular site, and IV and Injection Teachings.

Dobson specializes in providing skilled, infusion nurses who are knowledgeable in the care and monitoring of a variety of infusion therapies. Our infusion nurses assist the client and family in the care, coordination, and management of the medication and process.

Infusion services are available 7 days a week with visits ranging from as little as 2 hours for an injection instruction to 24 hours a day. Dobson must receive the referral and orders from the client's physician and contracting pharmacy or healthcare delivery system.

We understand that infusion therapy is very specialized, requiring individualized care plan for each client. Some of the procedures offered by our infusion nurses include: venous and arterial punctures as well as intravenous administration of Anti-Inflammatory and Steroid medications, Antibiotic and Antiviral medications, Cardiovascular medications, and more!

We assess client's response to the administered medication, coordinating findings with the client's physician. Educating clients on the signs and symptoms to report for adverse reactions and complications is an important part of our practice. Education is available for specific medications to allow the client to self-administer the infusion or injection.

Infusion nurses provide routine care of the tubing and dressing changes, along with assessing for any signs or symptoms of complications.

There are a variety of reasons a client needs an IV treatment or infusion. Dobson Healthcare has the ability to take a full-circle team approach to infusion therapy to assist all clients, from geriatric to pediatric.
